

ABSTRACT OF THE DISCLOSURE

An analyzer, preferably a desktop analyzer, includes: a component transport system; a liquid dispense or aspirating station; a member removably located on the transport system. The removable holder includes: a probe tip dispenser; a fluid supply section for holding a sample; a test element recess for holding one or more test elements or test element holders, wherein the removable holder is configured to contain the test element recess such that a test element can be acted upon by the liquid dispense or aspirating station, while the test element is in the recess; and a measurement device to analyze a sample. Another aspect provides a removable centrifuge model on the transport system, which separates samples, such as whole blood before analysis.
